Have You Heard!?

Winter/Spring 2015 Newsletter

February is Heart Disease Awareness Month!

Individuals with heart disease are 54% more likely to have hearing loss! The delicate structures of our ears are very sensitive to insufficient blood flow, which may cause significant trauma.

Common risk factors for heart disease include: smoking, high blood pressure, obesity, age, diabetes, high cholesterol, physical inactivity, and a family history of heart disease.

Eating right and regular exercise can reduce the risk for heart disease by 32% and improve your hearing health!

Did you know?

Hearing Consultants, Inc. offers a variety of wireless connectivity solutions such as, accessories for Bluetooth connectivity to your cell phone (including smartphone apps), wireless solutions for easy TV or music listening, wireless /hands-free solutions for your home phone, remote microphones to make conversations easier in background noise, and remote controls for your hearing aids!

Hearing loss can significantly impact your personal relationships!

Studies show strong evidence that hearing aid usage improves quality of life for individuals with hearing loss, including higher earning power, enhanced personal relationships and social life, and a reduced risk of anger, depression, and anxiety secondary to hearing loss.

Hearing Consultants, Inc. is here to help!

Call (863) 299-1251 x255 to schedule a hearing aid consultation today!

Valid only between 3/1/2015-3/31/2015
